CHAPTER 1

INTRODUCTION

Short-form filmmaking depends on the ability to communicate character, time and emotion through carefully selected images, transitions, performance and sound. “SECOND CHANCE” was developed as an academic short-film project in which the story is presented through a contrast between the protagonist’s present life and an earlier interview-day experience.

The submitted video deliberately begins with the later period rather than the beginning of the story. This creates a flashback structure: the audience first sees fragments of a changed life and is then taken back to the interview day. The approach allows the approximately two-minute submission to function as a compact film while retaining a larger story concept.

The project focuses on visual storytelling using accessible locations, smartphone cinematography, practical lighting, title cards, recurring props and montage editing. The submitted cut is approximately 134.7 seconds, so the report describes the actual short-film submission rather than assuming the complete planned longer version.

CHAPTER 2

PROJECT OVERVIEW

“SECOND CHANCE” is a short-film project built around a non-linear narrative. The submitted cut opens in the present with visual glimpses of the protagonist’s later life: working at a laptop, receiving phone notifications and moving through a calmer routine. The narrative then shifts to an earlier period identified as “2 MONTHS AGO – INTERVIEW DAY”.

The film uses the contrast between the present and the earlier interview day to introduce the central idea of a second chance. The protagonist is shown preparing herself, checking her phone, moving through the house, leaving home and travelling by car. Repeated images of the phone, bedroom, laptop and movement connect the different parts of the montage.

The production uses practical domestic and outdoor environments rather than a large-scale setup. The submitted video is approximately 2.25 minutes long and presents the beginning and emotional direction of a larger story through a compact visual montage.

CHAPTER 3

TITLE - SECOND CHANCE

The title “SECOND CHANCE” represents the central idea of an important opportunity and the possibility of change after a difficult or significant turning point. The story is structured so that the audience first sees the protagonist after a change has taken place and then travels back to the interview day that precedes it.

The title is reinforced by the present-to-past structure. The present-day material creates a visual question about what happened earlier, while the “2 MONTHS AGO – INTERVIEW DAY” card identifies the event around which the earlier part of the story is organised.

The title therefore functions as the identity of the film as well as a thematic reference to the turning point suggested by the interview-day narrative. The submitted two-minute cut presents this idea without resolving the entire larger story.

CHAPTER 4

GENRE

“SECOND CHANCE” can be described as a short drama with a reflective, motivational undertone. The film does not depend on extended dialogue or a conventional action sequence. Instead, its tone is created through visual contrast, performance, editing rhythm, colour treatment and the gradual movement between the present and the earlier interview day.

The present-day sections use composed shots and calmer activity, including laptop work and phone interaction. The interview-day material contains more hurried preparation, repeated movements, travel and tighter visual rhythms. This contrast supports the reflective nature of the narrative while keeping the film within its short duration.

The film’s dramatic quality comes from the importance of the opportunity represented by the interview and the visible difference between the protagonist’s present routine and her earlier preparation.

CHAPTER 5

OBJECTIVES

The main objective of “SECOND CHANCE” is to create a short narrative that communicates personal transformation through visual storytelling within a limited runtime.

- To create a short narrative that communicates a personal transformation through visual storytelling.
- To experiment with a present-to-past narrative structure within a limited runtime.
- To use editing, colour, title cards and recurring visual motifs to distinguish different time periods.
- To practise practical filmmaking using accessible locations, a smartphone camera and available lighting.
- To gain hands-on experience in shooting, sequencing, pacing, colour treatment and post-production editing.
- To develop the ability to compress a larger story concept into an approximately two-minute submission.

CHAPTER 6

STORY DEVELOPMENT

The core concept of “SECOND CHANCE” is built around the idea that a difficult opportunity can become a turning point. Instead of presenting the story entirely chronologically, the film begins by showing the protagonist after the change has already happened. The later scenes act as a visual question: what happened before this point?

The uploaded video establishes this structure through the opening “PRESENT” card and the later “2 MONTHS AGO – INTERVIEW DAY” card. The transition allows the interview-day material to function as a flashback without requiring a long verbal explanation.

The story development therefore focuses on a clear visual progression: present-day work and routine, time transition, interview preparation, movement through the house, travel, repeated phone imagery and a closing title treatment. The concept is deliberately compact so that the main story direction remains understandable within the submitted runtime.

CHAPTER 7

STORY SYNOPSIS

The film opens with the protagonist in a calmer present-day routine. She is shown in a bedroom, working at a laptop and interacting with her phone. Notification and work-related imagery suggest that her circumstances have changed. After this introductory montage, the film cuts to a title card identifying an earlier interview day.

The flashback shows the protagonist preparing herself, checking her phone, moving around the house, getting ready to leave and travelling by car. Additional shots return to the bedroom and phone, reinforcing the feeling of time pressure and the importance of the interview.

The submitted cut ends as a short visual teaser rather than resolving the entire longer narrative. The audience is shown the beginning and emotional direction of the “SECOND CHANCE” story through the contrast between the present and the earlier opportunity.

CHAPTER 8

CHARACTERS

The principal on-screen character is Riya. The film centres on her preparation for the interview and her later professional routine, which together provide the visual continuity between the two time periods.

The character is communicated primarily through physical actions rather than long dialogue. Her actions include working at a laptop, checking the phone, getting ready, handling belongings, moving through rooms, leaving the house and travelling by car. These actions establish routine, preparation and urgency within the limited runtime.

Supporting participants are used only where required by the filmed action. The submitted report does not establish additional detailed character biographies, so the focus remains on the principal character and the visual events surrounding her interview-day experience.

CHAPTER 9

SCENE DEVELOPMENT

9.1 Scene 1 - Present (Bedroom / Workspace)

The film opens on the protagonist's present-day life. The bedroom and workspace are shown through short atmospheric shots. She is later seen working at a laptop, establishing the present period before the story moves into the earlier interview-day sequence.

9.2 Scene 2 - Present-Day Montage

Close views of the laptop, phone and notifications are intercut with shots of the protagonist working. The sequence suggests a more settled professional phase and uses repeated visual elements to establish continuity.

9.3 Scene 3 - Time Transition

A black screen introduces the text "2 MONTHS AGO - INTERVIEW DAY". This title card clearly establishes that the narrative is moving into the past and functions as the main structural transition.

9.4 Scene 4 - Interview-Day Preparation

The protagonist is shown getting ready in the bedroom and wardrobe area. She checks her phone, handles her belongings and prepares to leave, creating the hurried preparation that characterises the flashback.

9.5 Scene 5 - Leaving Home

The protagonist moves through the house and toward the entrance. Doorway and movement shots compress the preparation into a fast visual sequence and connect the bedroom environment to the outside journey.

CHAPTER 9

SCENE DEVELOPMENT

9.6 Scene 6 - Travel

A car shot shows the protagonist continuing the journey while using the phone. This extends the interview-day movement beyond the house and provides a visual change of environment.

9.7 Scene 7 - Phone / Bedroom Motif

The edit returns to phone and bedroom imagery. The repeated bed and phone shots create continuity between the different parts of the interview-day montage and reinforce the importance of the phone as a recurring visual element.

9.8 Scene 8 - Further Preparation

The protagonist continues preparing and handling her belongings. Shorter shots create a sense of urgency and limited time without showing every step of the process.

9.9 Scene 9 - Visual Transition

Additional movement through the house and preparation shots maintain the flashback montage and connect the individual actions into a continuous visual progression.

9.10 Scene 10 - Closing Title / Story Identity

The “SECOND CHANCE” title is shown, reinforcing the film’s identity and the larger narrative about a turning point. The submitted cut ends as a visual teaser rather than completing the longer story.

CHAPTER 10

CLIMAX AND ENDING

The submitted two-minute cut does not contain the complete resolution of the larger “SECOND CHANCE” story. Instead, its dramatic movement is built around the interview-day preparation and the question created by placing that sequence after the present-day opening.

The time transition to “2 MONTHS AGO – INTERVIEW DAY” is the major narrative turning point within the submitted cut. Once the audience enters the flashback, the repeated preparation, phone checking, movement through the house and travel create increasing urgency around the important opportunity.

The ending uses the “SECOND CHANCE” title as a closing identity rather than showing the full consequence of the interview. The source report states that the longer version could continue with the interview-day outcome, the consequence of the missed opportunity, the protagonist’s realisation and the later-life transformation. Those events are therefore treated as future scope rather than as events already shown in the submitted cut.

CHAPTER 11

CINEMATOGRAPHY

The cinematography of “SECOND CHANCE” uses a mixture of wide establishing views, medium shots, close-ups and overhead/detail shots. The opening present-day sequence includes wider views of the bedroom and workspace, while phone and notification inserts provide close visual information.

During the interview-day material, the camera follows the protagonist through doorways and preparation activities. Variation in framing prevents the short montage from becoming visually repetitive and helps compress longer actions into short screen time.

The project uses practical smartphone cinematography and accessible environments. Framing of the laptop, phone, bedroom, doorway, wardrobe and car creates visual continuity between locations and time periods while keeping the production compact.

CHAPTER 12

LIGHTING

Colour and lighting are important visual elements in the submitted cut. Blue-toned lighting is visible around the workspace and bedroom in several present-day shots, while pink/purple lighting is used in other bedroom and preparation shots.

Warm outdoor and car imagery provides a contrasting natural-looking section. The colour changes are not treated as a single strict colour code throughout the video; instead, they contribute to mood and help the film move between calm, reflective and hurried moments.

The project therefore demonstrates how available or practical lighting can be shaped during shooting and post-production to create visual variation without requiring a large lighting setup.

CHAPTER 13

SOUND DESIGN

The submitted video includes its own edited audio track accompanying the montage. The source report does not provide a verified word-for-word dialogue transcript, so the audio is considered here as part of the overall pacing and transition design rather than as reconstructed screenplay dialogue.

Sound supports the movement between the present-day and interview-day portions of the film. Audio accompanies the rapid visual montage, phone interactions, preparation actions, travel imagery and title-card transitions, helping maintain continuity across the short edit.

The project demonstrates the importance of synchronising audio with visual rhythm. Because the film is primarily montage-based, the relationship between the edited soundtrack and the changing shot durations contributes to the sense of calm in the present and urgency in the flashback.

CHAPTER 14

EDITING TECHNIQUES

The final submitted video is constructed as a montage rather than a continuous real-time scene. Short clips are assembled to compress preparation and movement into a limited duration. The edit repeatedly returns to the laptop, phone and bedroom imagery so that the film remains visually connected even when locations change.

The most important editing decision is the non-linear opening. The audience first sees the present-day state and only afterwards receives the time marker “2 MONTHS AGO – INTERVIEW DAY”. This makes the earlier material function as a flashback.

Within the flashback, dressing, checking the phone, moving through the house, travelling and returning to phone or bedroom imagery are presented quickly. The shortened shots create a hurried feeling without requiring every action to be shown in real time.

Black title cards provide structural markers. “PRESENT” establishes the initial period, “2 MONTHS AGO – INTERVIEW DAY” introduces the flashback, and “SECOND CHANCE” establishes the film identity. The edit also uses blue and pink/purple colour treatments and repeated motifs to connect the montage.

CHAPTER 15

USE OF PROPS AND LOCATION

The project relies on practical locations that are easy to control: a bedroom, a home interior/workspace, interior passages, the house entrance, an outside area and a car. These locations reduce production complexity while allowing several visual environments to be created through framing and lighting.

Important visual props and motifs include the smartphone, laptop, bed, wardrobe/doorway, personal belongings and interview-related materials. The phone and laptop are particularly important because they appear in both the present-day and interview-day material and help connect the different periods.

The single-home-based production approach also allows the project to concentrate effort on cinematography, performance, editing, colour treatment and pacing rather than extensive location changes.

CHAPTER 16

RADIO PODCAST ADAPTATION

The submitted “SECOND CHANCE” report does not document a separate radio-podcast version of the film. The project was submitted primarily as a short-film video with an edited audio track. Therefore, this chapter does not claim that a separate podcast was produced.

For an audio adaptation, the visual elements established in the submitted film would need to be communicated through narration, sound and pacing. The present-day routine, the “2 MONTHS AGO - INTERVIEW DAY” transition, preparation, movement through the house and travel would need clear audio cues because the audience would no longer see the locations or title cards.

The existing edited audio component provides a starting point for considering such an adaptation, but the source material does not provide a completed podcast script or a separate podcast recording.

CHAPTER 17

RADIO PODCAST SCRIPT APPROACH

A radio-podcast script based on “SECOND CHANCE” would need to preserve the same present-to-past narrative structure established by the submitted film. The change in time would have to be stated through narration or an audio transition rather than relying on the on-screen title card.

The opening could describe the calmer present-day routine and the protagonist working at a laptop before an explicit narration cue introduces the earlier interview day. Preparation sounds, phone interaction, movement through the house, door and travel ambience could then replace the visual information used in the film.

Because the source report does not contain a completed radio-podcast script, this chapter records the adaptation approach supported by the film structure rather than presenting invented dialogue as if it were part of the submitted project.

CHAPTER 18

VOICE AND AUDIO PERFORMANCE

The source report does not provide a verified dialogue transcript or a separate voice-performance record. The submitted film communicates much of its story through physical action, visual montage, title cards and the edited audio track.

For an audio-oriented presentation, voice would need to remain clear and controlled so that the listener can follow the change in time and the protagonist's preparation. Pauses and changes in pacing could help distinguish the calmer present from the more hurried interview-day material.

The project demonstrates the importance of timing between sound and image. Phone interaction, movement, preparation and title transitions need consistent audio levels and accurate synchronisation so that the short montage remains coherent.

CHAPTER 19

PRODUCTION PROCESS

The production process can be considered in three stages: planning, shooting and post-production. The project was designed around accessible locations and a smartphone-based capture workflow, allowing the short film to be produced without a large-scale setup.

During production, footage was captured across the bedroom, workspace, home interior, entrance/outside area and car. The protagonist's preparation, phone interaction, movement and work-related actions were recorded as short visual moments that could later be assembled into a montage.

During post-production, the clips were sequenced into a present-day opening followed by the interview-day flashback. Title cards, colour treatment, phone and notification inserts, audio and pacing adjustments were combined to create the approximately 134.7-second submitted cut. Adobe Premiere Pro was used for the edit.

CHAPTER 20

CHALLENGES FACED

Compressing a larger story concept into a two-minute submission required selecting only the most informative visual moments. The shortened format meant that preparation, movement and travel had to be communicated through brief shots rather than complete real-time actions.

Maintaining clarity after changing the narrative order meant that the time-period transition had to be explicitly communicated through title cards. Preparation scenes also contain several similar indoor actions, so framing and colour variation were necessary to avoid excessive repetition.

Phone, laptop and notification inserts had to remain readable enough to function as story information while staying visually integrated with the montage. Balancing different lighting conditions between bedroom, workspace, outdoor and car footage also required post-production adjustment.

CHAPTER 21

LEARNING OUTCOMES

The project provides practical experience in constructing a non-linear short-film narrative and compressing real-world actions into a short montage.

- Learned how a non-linear structure can reveal story information gradually.
- Understood the role of title cards in orienting an audience when the chronology changes.
- Practised visual storytelling through props such as a phone, laptop, bag and interview-related materials.
- Learned to use colour and lighting differences to create visual mood.
- Improved editing skills by compressing real-world actions into a short montage.
- Developed practical understanding of how locations available at home can be converted into multiple film environments.
- Gained hands-on experience with framing, pacing, colour treatment and post-production editing.

CHAPTER 22

EXPECTED OUTCOME

The expected outcome of “SECOND CHANCE” is a compact short-film presentation that communicates a larger story concept through a present-day opening and an interview-day flashback. The submitted cut is approximately 2.25 minutes long and concentrates on the beginning and emotional direction of the narrative.

The film is expected to demonstrate how cinematography, colour, title cards, recurring props, performance and editing can work together to communicate a change in the protagonist’s circumstances without requiring a large cast or extensive locations.

As future scope, the film can be extended to the planned longer version by completing the interview-day narrative, showing the consequence of the missed opportunity, developing the protagonist’s realisation and completing the later-life transformation. The final version can also refine continuity, audio mixing, colour consistency and pacing while retaining the present-to-flashback structure.

CHAPTER 23

CONCLUSION

“SECOND CHANCE” demonstrates a short-film approach in which the story is introduced through the protagonist’s present and then revisited through a flashback. The submitted two-minute cut establishes this structure through the “PRESENT” and “2 MONTHS AGO – INTERVIEW DAY” title cards, followed by preparation, phone use, movement through the house and travel.

The visual language of the film relies on accessible locations, smartphone cinematography, colour treatment, repeated props and editing rather than large-scale production requirements. The result is a compact academic short-film submission that presents the beginning and emotional direction of a larger story.

The project provides practical experience in screenplay development, visual storytelling, cinematography, lighting, editing, pacing and post-production. Its future scope is to complete the larger narrative while retaining the present-to-flashback structure and refining continuity, audio mixing, colour consistency and pacing.
